

New Aisiki

Whitepaper

July 22

The Token Revolution.

Version 1.2

Mission

In Brazil people are being fooled every day, with false promises of magical gains, through malicious people, using the crypto-active market, to sell illusions of facilitated wealth.

Thus, creating a financial pyramid, which is a crime against the popular economy and is fraud (Law 1.521/51), we also have sellers of courses that promise exorbitant profits in the short and medium term.

We know that yes, it is possible to obtain profits through commercial practices, however, these profits are conferred to professionals who are really ready and prepared, who have specialized in their career in a solid way, and only open their services to third parties, through the laws and inspections in force in their country of operation.

Therefore, not even this professional could confer certainty of profit to his associates, because the financial market is volatile. Each share or crypto-active is a variable of a project or company, in order for a trader to be able to affirm a certain percentage of profit, he would have to have privileged information of this project or company that is on the market, once he takes advantage of such information to confer profit to himself or to third parties, he will be committing a crime, provided for in the (Law 6.385/1976).

Our mission is to clarify and demystify the cryptoactive market in Brazil, bringing clear and real information and teaching how to make profit the right way, without further illusions.

"Law 1.521/51 provides for crimes against the popular economy. In its article 2, item IX, the rule provides for the so-called "pyramid" or "pyramid scheme" crime, which consists of attempting or obtaining illicit gains, through speculation or fraudulent means, causing damage to several people."

"Law 6,385/1976 establishes that this is a crime: "Art. 27-D. Use relevant information not yet disclosed to the market, of which it has knowledge and of which it must keep secret, capable of providing, for itself or for third parties, undue advantages, through negotiation, in its own name or of third parties, with securities."

New Aisiki

New Aisiki

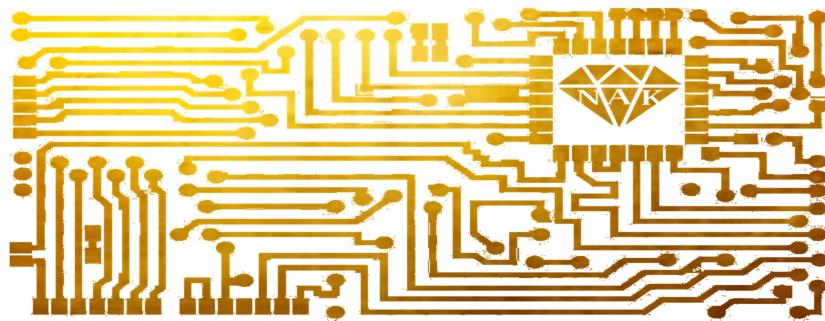

1.0 INTRODUCTION

New Aisiki is a long-term project, divided into strategic stages, aimed at bringing continuous, consistent, and proportional profit to its investors and to the company.

We have a clear and progressive development plan, with realistic and plausible goals. Focusing our development base first and foremost on investors, providing unparalleled benefits.

In its first phase we will launch the NAK Token, on the BscScan network, in order to acquire the necessary number of holders and transactions required by the major validation platforms, CoinMarketCap and CoinGecko.

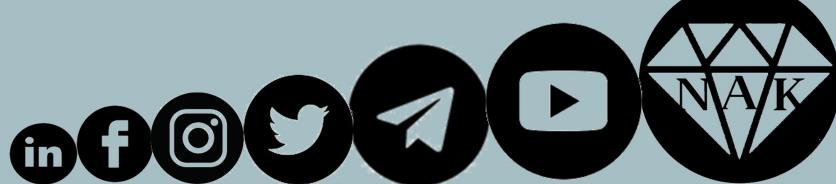

We will then begin the launch process on the following networks, ftmscan, Snowtrace, Polygonscan and Etherscan. All tokens are already created and documented on the website, and throughout this document.

We have extensive planning that includes building an eCommerce that can only be traded with the NAK token, on our own network and with partners that will be revealed at an appropriate time, respecting the evolution of the project. Thus supporting a new vision of decentralized trade, basing its trust on the strength of our token.

Taking advantage of the unique and exclusive method (ABCjr), developed only for the NAK token, which uses a system, never before used, of progressive, periodic and controlled destruction of part of the tokens, based on precise mathematical planning. Thus, even if others copy the code, they can hardly continue with a similar project, thus making the NAK token unique, consistent and absolutely safe for its holders.

This method allows the participant to periodically withdraw parts of their profits, without losing their initial percentage throughout the project. While controlling, so that there are no whales that could destabilize it, thus forming a solid passive income, not only during the evolution time, since we have other distribution methods.

Once the stipulated destruction limit is reached, the token will enter an automatic draw process, releasing the purchased percentages to its holders.

2.0 DEVELOPER

Aloisio Junior

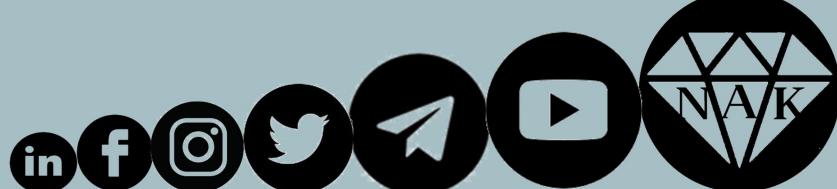

CEO
UI/UX Designer
Blockchain Expert
Web Developer

[Linkedin](#)

Specialist in Telecommunications. Business leader, with over eight years of experience, in the world of cryptocurrencies.

Among other skills, project manager, strategic people management, information security auditor, systems analyst, web developer, blockchain specialist, national product development specialist.

3.0 Road Map

3.1 Q2-2022 - Project Start

- 01 → Define the Scope
- 02 → Identify the Project Supporters
- 03 → Determine the Resources Available
- 04 → Build a Detailed Schedule
- 05 → Develop A Token Development Plan
- 06 → Create Whitepaper

3.2 Q3-2022 - New Aisiki Token (NAK) Development

- 01 → Develop the ABCjr Method of Capita Protection
- 02 → ABCjr test method
- 03 → Developing the NAK token
- 04 → Testing the NAK token in the BscScan TestNet
- 05 → Testing the NAK token on the Pancakeswap Finance TestNet

3.3 Q4-2022 - NAK Token Minting & Distribution

- 01 → Implementation on BEP-20, ERC-20, Fatom, Avalanche and Polygon networks
- 02 → Create LPs in the selected SWAP BNB
- 03 → Send LPs to Burn Portfolio
- 04 → Start Regional Sales
- 05 → Start National Sale & Destroy Burn Portfolio 1

New Aisiki

3.4 Q1 & Q2-2023 Digital Marketing

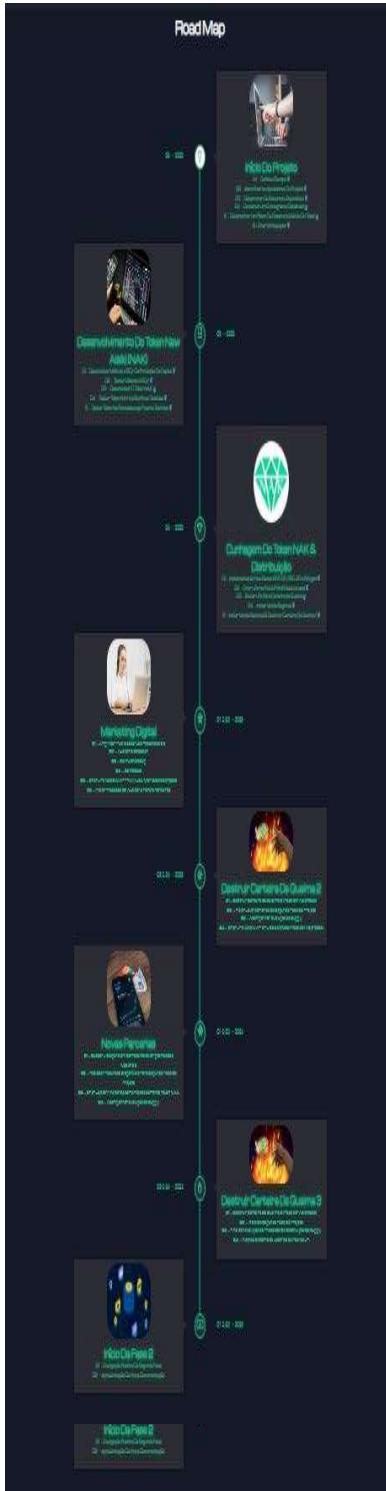

- 01 → Amplify Social Media Advertising
- 02 → BscScan Auditing
- 03 → CoinMarketCap
- 04 → CoinGecko
- 05 → Create LPs in Selected FTM/Avax/MaTIC SWAPs
- 06 → Starting Audit Process for Third Parties

3.5 Q3 & Q4-2023 Destroy Burn Wallet 2

- 01 → Destroy Burn Wallet 2 (Can be postponed)
- 02 → Start the second phase of the project
- 03 → Follow the evolution of the offer
- 04 → Create LPs in selected ETH SWAP (Can be advanced)

3.6 Q1 & Q2-2024 New Partnerships

- 01 → Listings on Cryptocurrency Brokers
- 02 → Allocate the available resources for the second phase of the project
- 03 → Create an Online Shop with NAK Token as currency.
- 04 → Follow the evolution of the offer

New Aisiki

3.7 Q3 & Q4-2024 Destroy Burn Portfolio 3

01 → Destroy Burn Wallet 3 (Can be advanced)

02 → The second phase of the project begins

03 → Finalize the Evolution of the Offer Destruction Process

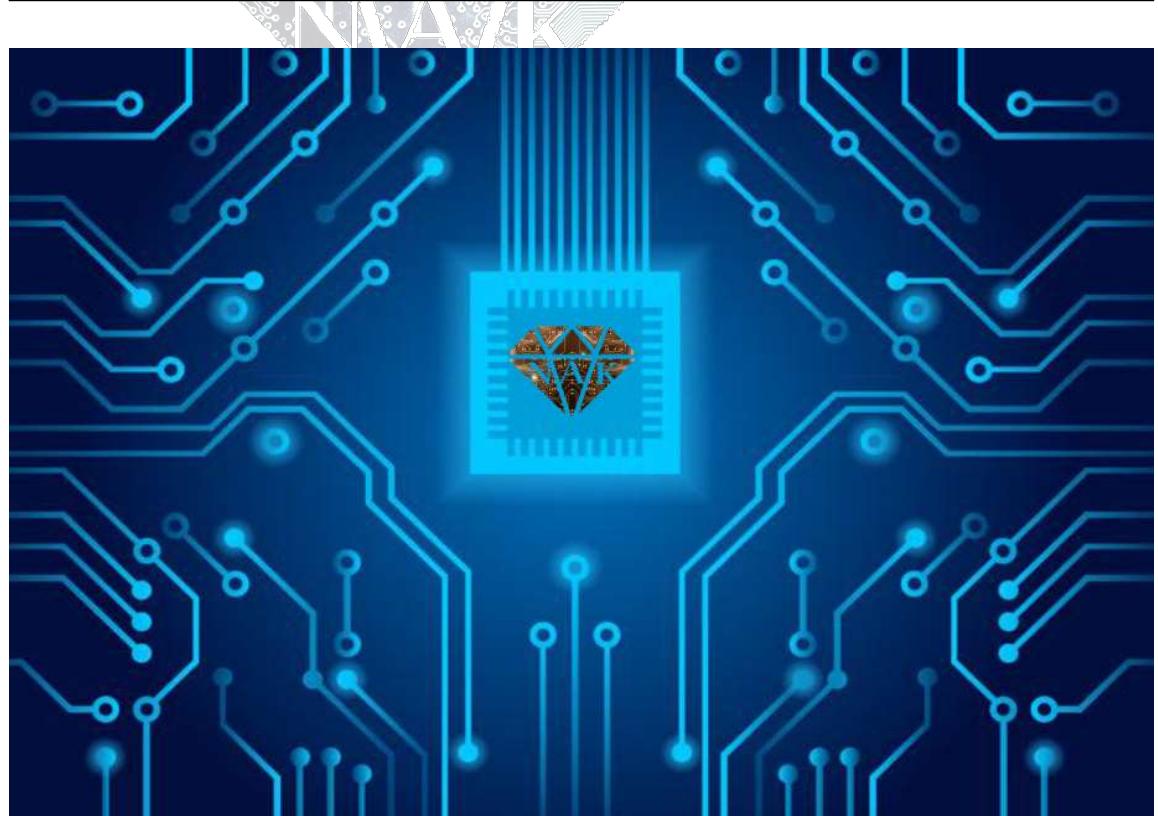

04 → LP Pool Lottery System Starts.

3.8 Q1 & Q2-2025 Phase 2 Start

01 → Public announcement of the second phase

02 → Introducing the New Documentation

4.0 TOKENOMICS

OUR NUMBERS			
Tokenomics			
Valid for all networks, BNB, ETH, Polygon, Fantom & Avalanche.			
2B Initial Supply Total	10% Destroyed On Purchase	10% Destroyed On Transfer	Swap Maximum Per Purchase
100M Final Supply Total	10% Destroyed On Sale	Swap Maximum Sale Limit	100% Maximum Per Transfer

New Aisiki

1. Initial Supply = 2.000.000.000
2. Final Supply = 100.000.000
3. Destroyed On Purchase = 10%
4. Destroyed On Sale = 10%
5. Destroyed On Transfer = 10%
6. Ceiling Bids = Swap
7. Sell Ceiling = Swap
8. Maximum Limit Transfer = 100%

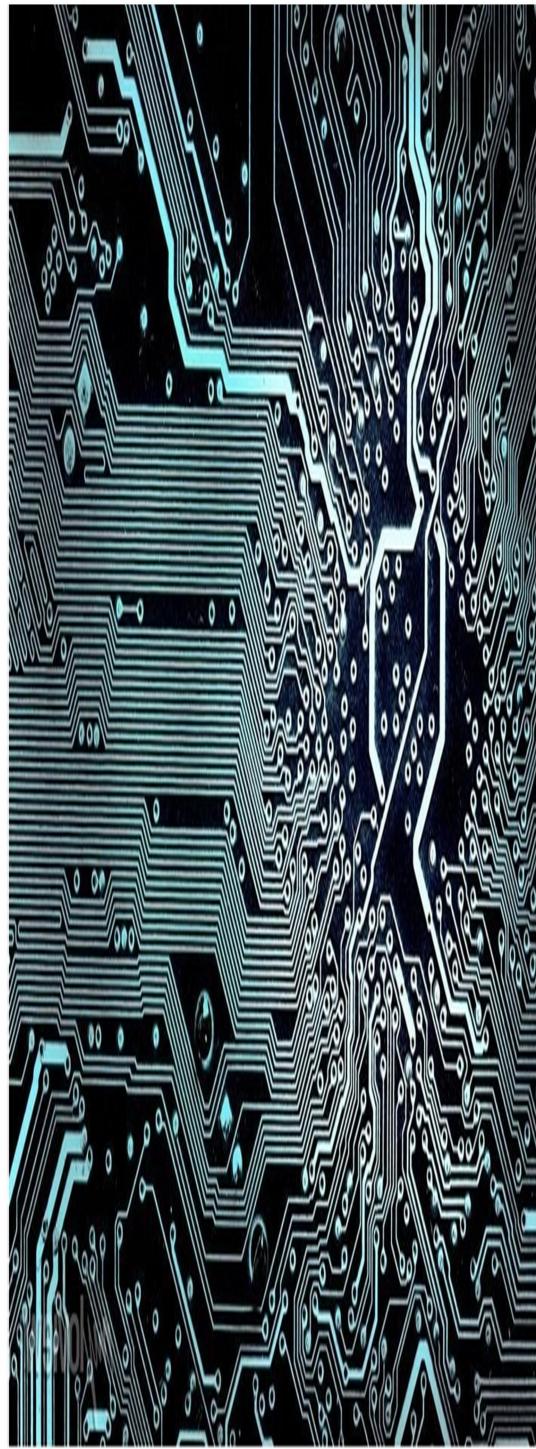

Whale control, limitation of sale by transaction, based on natural market flow.

5.0 DISTRIBUTION

Portfolio Destruction 1 - Used In Liberation
50% of tokens = 1.000.000.000
Wallet Destruction 2 - Utilization Q3 & Q4 2023 - 0x88d0354ac0e470e6e1b90c2c480cb815115ea98b

7.0 Method ABCjr

This method consists in limiting the transfers in proportion to the destruction of the total supply, up to the limit mathematically stipulated, in the case of the New Aisiki token (NAK), the transfers were restricted in lots of a maximum of 0.2% of the total supply, rules stipulated by the Swap itself, based on the LP, without financial penalties, up to 0.4 stipulated by the Swap itself, based on the LP, with medium financial penalties, up to 0.6 stipulated by the Swap itself, based on the LP, with severe financial penalties.

Remembering that these rates refer to the Swap itself, with variations in values stipulated by them, as well as applied by them. It is not possible to make purchases above 0.6 in a single purchase.

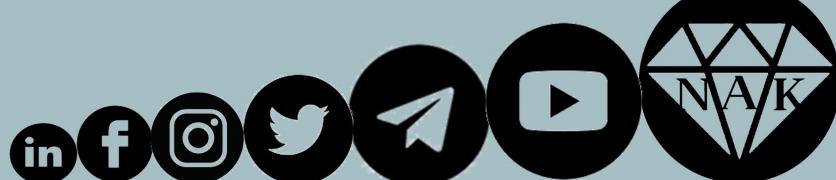

There will also be a periodic destruction of 10% per transaction of the tokens acquired through purchases or transfers between portfolios and sales, thus solidifying the Liquidity Reserve. The maximum destruction limit will occur until the total supply reaches 100,000,000 NAK tokens in circulation.

Another striking feature of this method is that, the entire LP is burned, we do not send NAK tokens, for wallet of death, in an attempt to create a false illusion of security.

As explained above, the LP will be sent to the wallet of death (burned), since the NAK token is destroyed and not burned, there is no need for the CEO of the project to keep this LP in his possession, thus forming the perfect and truly decentralized capital protection system. Soon generating a direct and passive income, once the holder acquires a lot.

For example: If a lot of 0.01% of the total Supply is acquired at the time the token was acquired, with the destruction of the NAK token and over time, its percentage will increase, due to the scarcity created by the continuous destructions of the NAK token, so every time your lot that was 0.01%, on the date it was acquired, over time, turns into 0.02% of the total supply, the holder can sell 0.01% and make profits periodically, every time his percentage doubles, without losing his initial position, not being obliged to maintain forced Hodl, on the contrary, every time the holder makes his profit, he helps to destroy and evolve the progress of the NAK token.

As if it wasn't already magnificent, the ABCjr method also provides a freedom from centralized brokerage houses, in its first stage, once it is not interesting to list the token in them, because they use mechanisms to facilitate their services, which would prevent the destruction.

8.0 Token Destruction Expected

Token Destruction Expectations

Token Destruction Expectations, creates an estimate of completion of the first phase of the project, based on the scarcity strength of the NAK token.

Aim to reach 100,000,000, total supply of NAK Tokens, on the BNB network.

Q4 2022 Token Total Supply

NAK Destroyed

68%

Q3 2023 Current Token Supply

NAK Destroyed

45%

Q4 2024 Current Token Supply

NAK Destroyed

84%

Q2 2025 Current Token Supply

NAK Destroyed

100%
